Lesson 4-4

Applications of Slope and X- and Y-Intercepts

Set 4-4b

Amy has a gift card to a department store worth \$500. Suppose each item she buys costs \$25. The value on the card is described by V(x) = 500-25x, where x represents the number of items bought.

- 1) If Amy buys seven items, how much is left on the card?
- 2) What is the y_i ? What does it mean?
- 3) What is the x_i ? What does it mean?
- 4) What is the slope? What does it mean?
- 5) How many items can Amy buy?
